

THI 6223 Human Computer Interaction

Assignment & Project Submission Grading Sheet

(To Be Filled Out By the Student)

N o	Student Name	Student ID	Major DCN/ST/BIA/AI/ Bio	Tutorial Session	Group
1	TANG YUT HEE	252UT254LM	AI	2A	1
2	CHA AIK HONG	252UT254LK	AI	2A	1
3	MOY YONG KANG	252UT254LL	AI	2A	1
4	LIM JIA XUAN	242UT2442W	AI	2A	1

**** 4 members from same Tutorial group**

Assignment Rubric (20%)

(To Be Filled Out By the Instructor)

Evaluation Item	0	1	2	3	4	5	6	7	8	9	10
A detailed Step by step manual to use Figma for Interaction Design											
Colours, Typography, Layouts, Element and Asset.											
Clarity of presentation (Tutorial Question & Answer)											
Question handling (Tutorial Question & Answer)											
Total Score (40%)											
Overall Score (40%/2 = 20%)											
Late Submission Penalty 2marks x _____ Day(s)											
Final Score											

Project Rubric (30%)

(To Be Filled Out By the Instructor)

Prototype Implementation	0	1	2	3	4	5	6	7	8	9	10
2 (TWO) Detail description of the concept of your design and the uniqueness of your own specific design.											
Draw 2 (TWO) user flow wireframes for your design. (The more detailed the better)											
2 (TWO) Figma prototype which adheres to UI Design guidelines.											
Distribution of tasks. (Contribution, synergy of teamwork and class participation)											
Clarity of presentation (Assignment & Project)											
Question handling (Assignment & Project)											
Total Score (60%)											
Overall Score (60%/2 = 30%)											
Late Submission Penalty 2marks x _____ Day(s)											
Final Score											

***Marks Indication:

1. Not achieved (0) – Students are not able to achieve the specific task.
2. Minimally achieved (1-2) – Student have only produced minimally acceptable results in the specific task.
3. Poor (3-4) – Student have performed a poor work resulting in insufficient results in the specific task.
4. Moderate (5-6) – Student have performed moderately work resulting in typical results in the specific task.
5. Satisfactory (7-8) – Student have performed satisfactory work resulting in sufficient results in the specific task.
6. Excellent (9-10) – Student have performed a very thorough work resulting in extraordinary results in the specific task.

Group Member Marks Recommendation by Group Leader:

No.	Group Member Name	Student ID	Contribution Assignment/Project	Effort Level (High/Moderate/Low)	Suggested Mark (%)	Remarks
1	Cha Aik Hong	252UT254 LK	Layout, Element	High		
2	Moy Yong Kang	252UT254 LL	Color, Typography	High		
3	Lim Jia Xuan	242UT244 2W	Toolbar, Move tools	High		

*** *** Group Contribution and Mark Allocation Policy

The group leader is responsible for recommending the allocation of marks among group members based on the effort level and quality of each member's contribution to the case study and assignment.

This policy also applies in situations where certain members demonstrate minimal or no participation (commonly referred to as “sleeping members” or “free riders”). In such cases, the group leader is required to report the issue and provide supporting evidence - such as meeting attendance records, task logs, or communication evidence - to justify any proposed mark adjustments.

The final decision on the distribution of marks will be subject to the lecturer's review and approval.

DECLARATION:

We agree that all members deserve equal marks for this project. We confirm that we have contributed equally to producing an original report in our best effort.

We hereby grant permission to Multimedia University, to

i. Use all the information provided for the Journal/Conference Publication/Book/Book Chapter/ exhibition/ showcase/ competition, or related Publication.

ii. Use all provided material, documents, images, and videos for the Journal/Conference Publication/ Book/Book Chapter/ exhibition/ showcase for the said publication.

We hereby confirm that all information and materials/documents/images/videos given are original and our own work.

We understand that all information and materials/documents/images/video given are to be published for the purpose of the Journal/Conference Publication/ Book/Book Chapter/ exhibition/ showcase/ competition, or related Publication only. We hereby take note that no imbursement will be received by providing the same.

Write down your ID (clearly) and sign (by all members):

Student ID: 252UT252LM Signature: 

Student ID: 252UT254LK Signature: 

Student ID: 252UT254LL Signature: 

Student ID: 242UT2442W Signature: 

Declaration by Group Leader

I hereby declare that all group members' names are correctly included in the above section. I hold a copy of this assignment which I can produce if the original is lost or damaged. I certify that not part of this assignment has been copied from any other student's work or from any other source except where due acknowledgement is made in the assignment/project/etc.

Group Leader's Signature: 

Group Leader's Name: Tang Yut Hee

Group Leader's ID: 252UT254LM

Date: 5/5/2026

Group Member's Declaration

(Each group member, including the group leader, must individually fill up and submit this form. This form has to be attached together with the assignment/ project submission.)

Group member's name: Tang Yut Hee

Student ID: 252UT254LM

For the purpose of completing this assignment, I have performed the following tasks:

1. Introduction
2. Login and Register part
3. Document checking
4. Create group discussions and meetings.

I hereby declare that I have assessed the final submission and I take full responsibility should there be any inaccuracies, incompleteness, omissions, delays or non-submission.

Group member's signature:

yr.

Group member's name: Tang Yut Hee

Group member's ID: 252UT254LM

Date: 5/5/2026

Group Member's Declaration

(Each group member, including the group leader, must individually fill up and submit this form. This form has to be attached together with the assignment/ project submission.)

Group member's name: Cha Aik Hong

Student ID: 252UT254LK

For the purpose of completing this assignment, I have performed the following tasks:

1. Layout part
2. Element part
3. Join discussions and meetings

I hereby declare that I have assessed the final submission and I take full responsibility should there be any inaccuracies, incompleteness, omissions, delays or non-submission.

Group member's signature: 

Group member's name: Cha Aik Hong

Group member's ID: 252UT254LK

Date: 5/5/2026

Group Member's Declaration

(Each group member, including the group leader, must individually fill up and submit this form. This form has to be attached together with the assignment/ project submission.)

Group member's name: Moy Yong Kang

Student ID: 252UT254LL

For the purpose of completing this assignment, I have performed the following tasks:

1. Part Color
2. Typography
3. Documentation
4. Checking

I hereby declare that I have assessed the final submission and I take full responsibility should there be any inaccuracies, incompleteness, omissions, delays or non-submission.

Group member's signature:

朱

Group member's name: Moy Yong Kang

Group member's ID: 252UT254LL

Date: 5/5/2026

Group Member's Declaration

(Each group member, including the group leader, must individually fill up and submit this form. This form has to be attached together with the assignment/ project submission.)

Group member's name: Lim Jia Xuan

Student ID: 242UT2442W

For the purpose of completing this assignment, I have performed the following tasks:

1. Completed the tasks which were distributed by group leader.
 2. Join discussions and meetings.
 3. Solve the questions with group members.
 4. Completed the tasks on time.
 5. Last check before submission.

Introduction

This report for assignment THI 6223 Human Computer Interaction is based on the application of fundamental user interface and interactions design principles using Figma, a popular collaborative design platform and tool. The aim of this project is to provide a detailed walkthrough of how to conduct interaction design in Figma, with a focus on important interaction design processes such as user login and registration, interface navigation, color application, typography settings, layout organization, element creation and prototyping.

By gradually analyzing the key features of Figma, such as the toolbar, move tools, color picker, typography, auto layout and wireframe, this project showcases valuable UI/UX design practice while following the design standards. Additionally, the project presents user flow wireframes and high-fidelity prototypes in Figma, showcasing innovative design solutions and unique interaction elements.

This assignment demonstrates a comprehensive grasp of HCI principles, prototyping, consistency in visual design and communication of design choices through teamwork, task allocation, and presentation. The work combines theoretical understanding with practical skills, demonstrating the creation of user-friendly, attractive, and functional digital interfaces.

Create a Design

2.1 Login

Figure 2.1.1 Main Interface of Figma Website

The platform is accessed via the main page which will be the landing interface and will give the user access to the important navigation menus including Products, Solutions, Community, Resources and Pricing. It also has the option of logging in, contacting sales and opening a new account. The purpose of this page is to present the services of the platform and appeal to potential users.

Figure 2.1.2 User Login Interface

The login page will enable the registered users to securely access their accounts by typing their email address and password. It is also possible to sign in with a Google account. Password recovery, single sign-on and account registration are also offered as convenient options.

2.2 Register

Figure 2.2.1 User Register Interface

New users can create an account on the registration page and access the design and collaboration tools on the platform. Regardless, the user can create a Google account to register or add their email address. This page will provide the onboarding process to the new users.

2.3 Main Toolbar

Figure 2.3.1 Toolbar

The toolbar at the bottom of the interface provides essential tools for navigating the canvas and creating design elements. Each icon represents a group of related functions accessible via the dropdown arrows.

2.4 Move tools

Figure 2.4.1 Move Tools

- Move (V): The primary tool for selecting, dragging, and repositioning layers on the canvas.
- Hand Tool (H): Allows you to pan around the infinite canvas without accidentally selecting or moving elements.
- Scale (K): Used to resize objects and their contents (like text or effects) proportionally.

2.5 Colors

Figure 2.5.1 Object select.

When user clicking any area within the object card container will trigger a transition to the corresponding detailed information screen.

Figure 2.5.2 Color select.

In the “Fill” function user can select the color that suite with the theme. After the selection the object’s background will be fill with the color that selected.

Figure 2.5.3 Color Adjust

To customize the element's appearance, users can fine-tune the color values by moving the saturation and brightness picker in the custom palette.

Figure 2.5.4 Hue slider

Adjust the hue slider to switch between different color spectrums (red, yellow, green, blue). This action dynamically updates the primary color displayed in the gradient picker above.

Figure 2.5.5 Transparency bar

Slide the transparency bar to fine-tune the opacity level. The current percentage is displayed in the input field next to the Hex code ranging from 0% (fully transparent) to 100% (fully opaque).

Figure 2.5.6 Color Model Options

Users can click the dropdown menu to select their preferred color format for design and development:

- HSB (Hue, Saturation, Brightness): Defines colour based on the colour shade, intensity, and brilliance, making it intuitive for designers to create harmonious palettes.

- Hex (Hexadecimal): Uses a six-digit alphanumeric code (e.g., #468888). This is the standard format for web design and digital assets.
- HSL (Hue, Saturation, Lightness): Like HSB but focuses on lightness, which is often preferred for CSS-based design workflows.
- RGB (Red, Green, Blue): Defines colour by the intensity of light for each primary color on a scale from 0 to 255.
- CSS: Provides the functional code (e.g., RGB(70, 136, 136)) that can be directly copied and pasted into a website's stylesheet.

Figure 2.5.7 Eyedropper Tool

Click the eyedropper icon to activate the color picker; then, simply click on any pixel within the workspace to instantly apply that specific color to your selected element.

Figure 2.5.8 Add fill

The Add Fill function allows users to layer multiple colors on a single element. By blending additional color layers, you can create sophisticated gradients and rich textures that make the interface more visually stunning.

Figure 2.5.9 Toggle visibility

The Toggle Visibility icon (eye icon) allows users to hide or show specific effects instantly. By toggling this feature, you can compare the design with and without the effect to better evaluate its visual impact on the canvas.

Figure 2.5.10 Remove Fill

Users can click the Remove Fill icon (the minus '-' button) to permanently delete a color layer. This allows you to quickly clear unwanted fills and simplify the element's appearance.

Figure 2.5.11 Selecting fill types

2.6 Typography

Figure 2.6.1 Fonts Selection

Users can customize the typeface by selecting a text layer and interacting with the Typography section. Clicking the font selector (2) will trigger the Fonts Menu (3), where users can search for and apply different fonts to the selected content.

Figure 2.6.2 Font size Selection

Users can fine-tune text hierarchy using the Font Weight (1) and Font Size (2) controls within the Typography panel. These settings allow for precise adjustments to visual emphasis and readability on the canvas.

Figure 2.6.3 line height & letter spacing

Figure 2.6.4 example of line height & letter spacing

The Line Height tool (1) controls the vertical distance between lines of text. Increasing this value (e.g., to 500%) creates more breathing room between lines, which is ideal for improving readability or creating specific stylistic layouts.

The Letter Spacing tool (2) adjusts the horizontal gap between individual characters. By increasing the percentage (e.g., to 30%), users can spread the letters apart to achieve a more airy, modern look or to ensure the text fits perfectly within a defined width.

Figure 2.6.5 Alignment

The Alignment tools allow users to control the positioning of text within its bounding box. These settings ensure that content is organized and visually balanced across the design.

Figure 2.6.6 Advanced Type Settings

or more complex styling, click the Type Settings icon (marked as 1) in the Typography panel.

Figure 2.6.7 Details of Alignment

- Align Left: Positions text against the left edge. Best for standard reading.
- Align Centre: Places text in the horizontal centre. Ideal for headlines and buttons.
- Align Right: Positions text against the right edge. Used for dates or numbers.
- Align Justify: Stretches the text so that each line has equal width the box.

Figure 2.6.8 Details of Decoration

- None: Removes all text decorations and returns the text to its original state.
- Underline: Adds a horizontal line beneath the text, commonly used for hyperlinks.
- Strikethrough: Draws a line through the centre of the text, often used to indicate deleted info or discounted prices.
- Detail Settings: Click the arrow icon to navigate to the Advanced Decoration menu for more precise styling options.

Figure Details of Case

- Original: Maintains the text exactly as it was typed.
- Uppercase: Converts all characters to capital letters (AG).
- Lowercase: Converts all characters to small letters (ag).
- Title Case: Capitalizes the first letter of every word (Ag).
- Small Caps: Displays uppercase letters in the size of lowercase characters.

Figure 2.6.9 Details of Vertical Trim

- Standard: Keeps the default font leading and spacing.
- Cap Height Trim: Removes extra space above the text so the bounding box snaps directly to the top of the characters for precise alignment.

Figure 2.6.10 Details of List Style

- None: Standard paragraph text without formatting.
- Bulleted List: Adds bullet points to the start of each line.
- Numbered List: Organizes text into a sequential numbered list (1, 2, 3).

Figure 2.6.11 Details of Paragraph spacing

- Paragraph spacing: Enter a numerical value to increase or decrease the vertical gap between different paragraphs.

Figure 2.6.12 Details of Truncate text

- Truncate text: Automatically adds an ellipsis (...) to the end of the text if it exceeds the width of the bounding box.

2.7 Layout

Figure 2.7.1 Initial empty draft workspace

This is the interface of an empty draft where the Layout section is absent from the right-hand sidebar.

Figure 2.7.2 After create a object

When an object is created, the Layout section automatically populates in the right-hand sidebar

Figure 2.7.3 Details of Dimensions

Besides resizing objects directly on the canvas, users can also specify precise measurements by typing values into the W (Width) and H (Height) fields under the Dimensions section

Figure 2.7.4 Details of Lock aspect ratio

As shown in Figure X, when user enabling the Lock aspect ratio feature ensures that any change made to the width or height is automatically reflected in the other dimension, maintaining the object's original proportions.

Figure 2.7.5 Toggle auto layout

In Figma, when the user enables this feature, selected elements will automatically arrange and align, and adjust spacing and size according to content changes, making the design neater and more responsive; when disabled, it reverts to manual free layout.

Figure 2.7.6 Details of Toggle auto layout

The Auto Layout Toggle panel allows you to adjust settings such as flow, dimensions, minimum width, alignment, gap, and padding to control how elements are arranged and spaced automatically within a layout.

Figure 2.7.7 Auto layout settings

The Auto Layout Settings include options such as Strokes (Included or Excluded) and Canvas Stacking (First on top or Last on top), which control how borders are calculated in the layout and how elements are layered within the design.

Figure 2.7.8 Details of Padding

When expanding Padding, additional options such as right and bottom padding will appear, allowing more precise spacing control. Below that, Clip Content can be enabled to hide any content that extends beyond the frame, ensuring that only elements within the defined layout area are visible.

2.8 Element

Figure 2.8.1 Create Element

To create a new element, select the desired shape from the toolbar and click-drag on the canvas to draw your object, using the real-time dimension labels and blue smart guides to ensure perfect alignment and sizing within your layout.

Figure 2.8.2 Alignment for element

Selected elements can be positioned precisely using the Alignment section in the right-hand properties panel:

- Align Left: Snaps the element to the far-left edge of the frame.
- Align Right: Snaps the element to the far-right edge of the frame.
- Align Top: Pins the element to the very top of the frame.
- Align Bottom: Pins the element to the very bottom of the frame.

- Align Centres: Centres the element horizontally or vertically within the container.

Figure 2.8.3 Position

Users can also adjust the position by more accurate ways that's using the 'position' function. This function allow user to enter the position by using the X and Y to adjust the position.

Figure 2.8.4 Rotation

Users can rotate selected elements using the rotation settings in the properties panel to change their orientation:

- Rotation Angle: Enter a specific degree (e.g., 30°) into the rotation field to tilt the object at a precise angle.

- Manual Rotation: Hover the cursor near any corner handle until it turns into a curved arrow, then click and drag to rotate the element freely.
- Flip Horizontal: Quickly mirror the object from left to right using the horizontal flip button.
- Flip Vertical: Quickly mirror the object from top to bottom using the vertical flip button.

Figure 2.8.5 Stroke

The Stroke panel allows users to add and customize an outline for selected elements by defining the color, setting the border thickness (weight), and choosing whether the line appears on the Inside, Outside, or Center of the object's boundary.
